Dear parent/guardian and student,

The math summer work is geared to help students begin the 20-21 school year after a short review of material that was already taught. This work is a review from previous years and will not be re-taught in September. This assignment will not be graded. I strongly recommend that all students check that they actually remember all these concepts by trying some problems. The problems are organized by topic, and a short video lesson is attached to most problems, as well as example of similar problems. It will serve you best if you do this assignment a few days before the first day of school. The assignment will be available starting 8/1/2020.

Follow the instructions below to get the assignment.

Students will create their own accounts by going to DeltaMath.com, clicking "Create Account" then typing in Mr. Ben-Nun’s teacher code: 708619. Students will make a username with their school email and a password. Next, the student should type their full first and last name and select the correct summer 2020 work from a dropdown menu. (Algebra 2 honors, Algebra 2 Not honors, or college math)

See you in September,

Mr. Ben-Nun
